## R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
#1. Use "Su_raw_matrix.txt" for the following questions (30 points).
# Load in the data set from disk.
# (a) Use read.delim function to read Su_raw_matrix.txt into a variable called su.

*#3. Perform the steps below with "dat" dataframe which is just a sample data for you to observe how each plot function*  
 *#( 3b through 3e ) works. Notice that you need to have ggplot2 library installed on your system. Please refer slides how*  
 *#to install and import a library. Installation is done only once, but you need to import the library every time you need it*  
 *#by saying library(ggplot2). Then run the following commands for questions from 3a through 3e and observe how*  
 *#the plots are generated first. (20 points)*  
 *#(a) dat <- data.frame(cond = factor(rep(c("A","B"), each=200)), rating = c(rnorm(200),rnorm(200, mean=.8)))*  
dat <- data.frame(cond = factor(rep(c("A","B"), each=200)), rating = c(rnorm(200),rnorm(200, mean=.8)))

show(t4)
```

*#(f) Read "diabetes\_train.csv" into a variable called diabetes and apply the same functions 3b through 3e for the mass attribute of diabetes and save the images. (Hint: instead of cond above, use the class attribute to color your groups. When you have fill option, your plots should show same type of chart for both groups in different colors on the same figure. Keep in mind that diabetes and dat are both DataFrames)*

```
diabetes <- read.csv(data.file2, header = TRUE, sep = ',')

p3 = ggplot(diabetes, aes(x=mass, colour=class)) + geom_density()
